EARNED VALUE APPLICATION

Abstract

Obtaining an earned value includes storing a

5   simulation version of a project baseline. The project

baseline includes tasks that define a project associated

with the project baseline. The simulation version is

copied to create an operative version of the project

baseline. The simulation version is augmented with an

10   additional task such that the simulation version maintains

separate baselines for the additional task and for pre-

existing tasks. The additional task is mapped from the

simulation version to the operative version such that the

operative version incorporates the additional task and the

15   pre-existing task into a single baseline. The earned value

is obtained for the project using the operative version.
